## AUTOMATIC IDENTIFICATION SYSTEM (AIS) TEST REPORT

Name	of ship/call sign:				
MMS	I number:				
Port o	f registry:				
IMO I	Number:				
Gross	tonnage:				
Date 1	keel laid:				
1.	Installation details				
	Item	Status			
1.1	AIS transponder type:				
1.2	Type approval certificate				
	71 11				
1.4	Drawings provided? (Antenna-, AlS-arrangement and block diagram)				
1.5	Main source of electrical power,				
	Emergency source of electrical power,				
	Capacity to be verified if the AIS is connected to a battery				
	Pilot plug near pilots operating position?				
1.9	120 V AC provided near pilot plug? (Panama and St. Lawrence requirement)				
<u> </u>					
2.	AIS programming - Static information				
2.1	MMSI number				
2.2	IMO number				
2.3					
2.4					
2.5	71 1				
2.6					
2.7	2.7 Location of GPS antenna				
	ATC				
3.	AIS programming - Dynamic information				
3.1	1 1				
3.2	Time in UTC (Source: GNSS)				
3.3	Course over ground (COG) (will fluctuate at dockside) (Source GNSS)				
3.4	Speed over ground (SOG) (zero at dockside) (Source: GNSS)				
3.5					
3.6	Navigational status				
3.7	Rate of turn, where available (ROT)				
3.8	Angle of heel, pitch and roll, where available				
4.	AIS programming - voyage related information				
4.1	Ships draught				
4.2	Type of cargo				
4.3	Destination and ETA (at masters discretion)				
4.4	Route plan (optional)				
4.5	Short safety-related messages				

Report No.:

5.	Performance test using mea	asuring instrument			
5.1		AIS Ch. 1 and 2, GMDSS Ch. 70			
5.2		Ch. 1 and 2, GMDSS Ch. 70			
5.3	Polling information Ch. 70				
5.4	Read data from AIS				
5.5	Send data to AIS				
5.6	Check AIS response to "vir	tual vessels"			
6.	"On air" performance test				
6.1	Check reception performan	ce · 16 · 4 · 1 · N/TEC			
6.2	Confirm reception of own s				
6.3	Polling by VTS/shore insta	liation			
Remarks:					
The AIS has been tested according to IMO SN/Circ.227 and resolution MSC.74(69), annex 3					
Nam	e of Radio Inspector	Date and place	Name of Radio Inspector Company		
-					

## GUIDELINES ON ANNUAL TESTING OF THE AUTOMATIC IDENTIFICATION SYSTEM (AIS)

- The annual testing of the automatic identification system (AIS) should be carried out by a qualified radio firm approved by IRS.
- The annual testing of the AIS installation should include:
  - .1 installation details including antenna layout, initial configuration report, interconnection diagrams, provision of the pilot plug and power supply arrangements;
  - .2 checking the correct programming of the ships static information;
  - .3 the ability of the AIS to receive ships dynamic information from the appropriate sensors;
  - .4 the ability to correctly input the ships voyage related data;
  - a performance test of the equipment including radio frequency measurements; and
  - an on-air test that the unit is working correctly using for example an appropriate Vessel Traffic Service (VTS) station or a suitable test equipment.
- To accommodate performance test to align with the appropriate survey under the Harmonized System of Survey and Certification (HSSC), the annual testing may be carried out:
  - .1 up to 3 months before the due date of the passenger ship renewal survey or the cargo ship safety equipment renewal survey; and
  - .2 3 months before or after the due date of the cargo ship <u>safety equipment</u> periodical/annual survey (the maximum period between subsequent test is governed by the time window associated to the subsequent surveys, unless either certificate has been extended as permitted by SOLAS regulation I/14, in which case a similar extension may be granted by the Administration).
- The annual testing should be recorded in the format as per doc no. AIS AS Checklist (Rev 0). A copy of the test report should be retained onboard the ship.
