

Indian Register of Shipping

## **REPORT OF HSC SAFETY SURVEY**

For Passenger Craft

Type of Survey: Annual Survey/Periodical Survey/Intermediate Survey/Renewal Survey/ Change of Flag Survey/General Examination\*

Name of Craft/Yard No.:
IMO No.:

I. R. No.:	•••
Port of Survey:	

NOT	ES:
1	Use "Y" for Yes/Satisfactory, "N" for Not Satisfactory, "NO" for No, "NA" for Not Applicable, "P" for Remains
	outstanding.
2	"Code" in this report refers to "International Code of Safety for High-Speed Craft".
3	Please refer relevant administration instructions (D.13) for flag specific requirements.
4	Where a craft is fitted with equipment over and above the requirement, same are to be examined and reported.
5	Appropriate details of the approval (Certificate No, Date, issuing Authority) are to be filled in remarks column at the time
	of Change of Flag, installation of equipment or Change of Certification as relevant, alternatively page of document
	reflecting the approval details is to be uploaded as supporting document.
6	Ships & Crew certificates/Documents are to be available on board in original.

Sr. No.	Item	Y/N/NO/ NA/P
1	General	I
1.1	Checking that all Statutory Certificates (as applicable based on size/type of craft) and the Class Certificate are valid at the time of survey & Continuous Synopsis Record (CSR) is provided. (Note: During change of flag survey, verify that all CSR documents issued by previous and new flag Administrations are available onboard. However, where original CSR document from new flag Administration is yet to be received on board, verify that all CSR documents issued by the previous flag Administration/s is/are available and that Company/master has applied to the new flag Administration for issuance of new CSR. For this CSR Form 2 & CSR Form 3 are completed by Company/master and attached to the last CSR.)	
1.2	Checking that the Craft is in possession of valid permit to operate.	
1.3	Master and crew in possession of valid STCW certificates and type rating certificates?	
1.4	Checking that manning of the craft meets the minimum safe manning requirements.	
1.5	Checking that approved technical manuals (Route operating manual, Craft operating manual, Training Manual, Maintenance Manual and Servicing Schedule) are available on board.	
1.6	Confirming that following information is available in the Craft Operating Manual. (i) Evacuation procedure (ii) any limitation on the operation of the craft (as may be necessary to ensure that the redundancy or safeguards in the systems provide equivalent safety) (iii) max permissible speed at which the craft may be towed (iv) information on controllability and maneuverability (v) instructions regarding craft limitations and required actions subsequent to prescribed failures (vi) Critical speed range for engines	
1.7	Fire control Plans (including duplicate set permanently stored in a prominently marked weather tight enclosure outside the deck house) properly posted. FCP Plan Approved byon	
1.8	Practice Musters and Drills. (It is also confirmed that the person in charge of survival craft and in the case of lifeboats the second in-command have a list of the survival craft crew) LSA Plan Approved byon	
1.9	Confirming that information on change in craft behavior during transition from one type of operating surface or mode to another and craft operating limitations due to surface irregularities is available to the Master.	

1.10	Confirming that clear instructions to be followed in the event of an emergency is provided for each person on board.	
1.11	Confirming that illustrations and instructions in appropriate languages are posted in public	
	spaces and conspicuously displayed at assembly stations, at other passenger spaces and near	
	each seat to inform passengers of their assembly station, the essential actions they must take in an emergency and the method of donning lifejackets.	
1.12	Confirming that muster lists are exhibited in conspicuous places throughout the craft including the control compartment, engine-room and crew accommodation spaces	
2	Buoyancy, Stability and Subdivision	I
2.1	Date of last inclining/lightweight survey	
2.2	Loadline permanently marked on craft sides verified?	
2.3	Draught-indicating system verified for correct functioning if fitted?	
2.4	Examining and testing of all watertight doors incl. local and remote operation, indicators for close/open position, audio/visual alarm during door operation, provision of power in case of	
	main power failure.	
2.5	Examining the watertight integrity has been maintained at all bulkhead penetrations.	
2.6	Shell doors, loading doors, inner bow doors, vehicle ramps and other closing appliances where provided (for ro-ro crafts).	
2.6.1	Examining the shell doors, loading doors, inner bow doors, vehicle ramps and other closing appliances	
2.6.2	Examining the weather tightness of the shell doors, loading doors, inner bow doors, vehicle ramps and other closing appliances where provided.	
2.6.3	Examining and Testing the indicator and alarm system, power supply for the indicator/alarm system are independent of the power supply for the door operation.	
2.6.4	Examining the television surveillance and water leakage detection system.	
2.7	Examining the closing arrangement and weather tightness of all accesses leading below deck in	
	the ro-ro spaces, all accesses and for vehicle ramps if installed. Provision of alarm indicator for these closing arrangements. Verification of television surveillance arrangement for special	
	category spaces and ro-ro spaces if provided.	
2.8	Examining the doors, windows and other openings in boundaries of weather tight spaces/ superstructures for weather tightness.	
2.9	Examining the means of securing weather tightness of cargo/other hatchways, machinery space openings, miscellaneous openings, air pipes and ventilators in exposed decks.	
2.10	Examining the scuppers, sanitary discharges together with valves and their control gear	
2.11	Examining the monitoring program for buoyancy medium (e.g. foam etc.), as applicable	
3	Structures	•
3.1	Checking that no unauthorized alteration, modification done to original as-built arrangement	
4	Accommodation and Escape Measures	
4.1	Confirming that the general arrangement, fire control and evacuation arrangement incl. protection of the passengers and crew during normal and emergency conditions is on board	
4.2	Confirming that escape routes are satisfactory and with no obstructions. Notices/directions are posted to direct passengers to emergency exits (evacuation stations and safe areas). Closing, latching and locking of exit doors is readily apparent to crew.	
4.3	Examining the seating arrangement for crew and confirmation that the safety belts for as well as crew seats are in order.	
4.4	Examining the handholds at embarkation stations, anti-skid treatment of the embarkation deck, guardrails or bulwarks fitted on all exposed parts of decks to which crew have access	•••••
4.5	Examining the spaces accessible to crew & passengers, that the arrangement of operating controls, electrical equipment, high-temperature parts and pipelines, rotating assemblies or other items if fitted are adequately shielded, isolated, or otherwise protected.	
4.6	Examining & testing the general emergency alarm and public address system to confirm that these are operational and audible in all passenger, crew areas, escape routes and embarkation station, as applicable.	
4.7	Examining the illuminated or luminous notices or video information system(s) visible to all sitting crew passengers, in order to notify them of safety measures are in satisfactory condition. Verification of any visual information system_available to master is in order.	

		-p
4.8	Confirming that public spaces, evacuation routes, exits, lifejacket stowage, survival craft	
	stowage, and the embarkation stations are clearly and permanently marked and illuminated.	
	Clear markings', including the location of the fire control plan, is provided for the guidance of rescue personnel outside the craft.	
4.9	Examining the means of escape from main propulsion machinery spaces and ro-ro spaces.	
4.10	Examining that arrangement for storage of baggage, store and cargo including arrangement for preventing shifting during voyage and falling from the overhead shelves are in order. Loading limits are durably marked in the compartments and closures of exterior openings are weather tight.	
4.11	Confirming the noise level in public spaces, crew accommodation and operating compartments. {Noise level in public spaces and accommodation shall not exceed 75dB(A) and in operating compartments shall not exceed 65dB(A)}	
5	Directional Control System	
5.1	Examining and testing of direction control system to confirm it is in efficient condition especially with regard to the provision of back up electrical system, automatic operation in case of a power failure, provision of secondary means of actuation and single failure criteria. Confirming that directional control can be accomplished without undue physical effort	
5.2	Where directional control systems can also be operated from other positions, checking the two- way communication between the operating station and these other positions. Checking the indications at the operating station and other positions to provide the person controlling the craft with verification of the correct response of the directional control device to the demand, and indication for any abnormal responses or malfunction.	
6	Anchoring, Towing and Berthing	
6.1	Checking attachment of anchoring equipment, towing bitts, mooring bollards, fairleads, cleats and eyebolts are satisfactory.	
6.2	Examination of enclosed space containing the anchor-recovery equipment to ensure that persons using the equipment are not put at risk with particular attention to the means of access to such spaces, the walkways, the illumination and protection from the cable and the recovery machinery.	
6.3	Examining and testing of two-way voice communication between the operating compartment and persons engaged in dropping, weighing or releasing the anchor.	
6.4	Checking that adequate mooring ropes are provided.	
6.5	Checking the operational test of anchoring equipment, as applicable	
7	Fire Safety	
7.1	Confirmation that notices/instructions available forbidding passengers to any special category spaces and open ro-ro spaces during the voyage.	
7.2	Checking the material for any thermal & acoustic insulation, deck finish material, exposed surfaces in corridors, stairway enclosures and bulkhead, ceilings/linings including furniture and furnishings etc. where repairs/renewals have been affected meet the requirement of the Code.	
7.3	For crafts using fuel oil with flash point below 43deg C (use of fuel with flash point below 35deg C is not allowed), examination and test of fixed vapour-detection system.	
7.4	For crafts using fuel oil with flash point below 43deg C, Confirming that electrical equipment in spaces where fuel leakage can occur are of "safe type".	
7.5	Examination and testing of manual and remote shutting of dampers and ventilation fans.	
7.6	Checking the weather tightness of ventilators. Confirming that ventilation system main inlet/outlets and ventilation fans are capable of being operated from outside the spaces being ventilated, controls of ventilators are prominently and permanently marked to indicate shut-off is open or closed. For areas of major fire hazard these are capable of being operated from a control station.	
7.7	Examination and Testing of main and emergency fire pumps.	
7.8	Where deep-fat cooking equipment is installed, verification of the arrangement to confirm same meets the requirements of the Code.	
7.9	Extinguishers and Foam Applicators	
7.9.1	Examining that all extinguishers and foam applicator unit was fully charged and in their stowed position	
7.9.2	Date when charged: Extinguishers Applicator Units	

7.9.4	Confirming that the spare charge for each extinguisher other than for gas cylinder was provided.									
7.9.5	Confirming that the spare gas cylinders provided (spare cylinders 100%)									
7.9.6	Checking all extinguishers in their stowed positions and a random check revealed no discharged									
7.10	Examining the exhaust ducts from galley ranges are provided with grease trap and fire dampers, a fixed means of extinguishing fire within the duct, remote control for shutting off the exhaust/supply fans and arrangement for inspection and cleaning.									
7.11	For ventilation ducts passing closing fire damper adjacent to	through a fire resisting division, Checking the failsafe automatic o the division.								
712	<b>Fixed Fire/Smoke Detection</b>	and Fire Alarm Systems								
7.12.1	Examination and testing of fix	ed fire/smoke detection and alarm system								
7.12.2	Checking that an audible alar control panel(s) not responded	m was activated automatically if visual and audible signal at fire to within two minutes								
7.12.3		power supply is available for these system and power supplies and n is monitored for loss of power or fault condition and initiate s at the control panel.								
7.12.4	spaces covered and the location testing and maintenance is pro-									
7.13	Fixed Fire Extinguishing Sys	stem								
7.13.1	LOCATION	INDICATE TYPE OF SYSTEM FITTED								
	Engine room									
	Boiler room									
	Pump room									
	Dry cargo spaces									
	Accommodation spaces									
	Cargo tanks									
	Galley exhaust ducts									
	Paint locker									
7 1 2 2	Other spaces as on record									
7.13.2	CO <sub>2</sub> System	∼ 1								
	Date container(s) content verif									
	Date container(s) pressure test	ed								
	Date system last serviced	1021 1521								
	(Dates as applicable)	. 10y'ly 15y'ly								
7 1 2 2		ting as far as practicable and found satisfactory	•••••							
7.13.3	Halon Systems	× 1								
		ied								
	· · · · · · · · · · · · · · · · · · ·	ed								
		as far as practicable and found satisfactory								
7.13.4	Foam Systems	as fail as practicable and found satisfactory	•••••							
7.13.4	Date foam: supplied to craft	sample testedears of supply and subsequently every year)								
		imple tested at an accredited laboratory and test result found								
	· ·	testing as far as practicable and found satisfactory								
		ng of foam system carried out and test report for same available								
7.13.5	Fixed Water Spraying System	ms								
		testing as far as practicable and found satisfactory								
7.13.6	Fixed Local Application Fire									
		Local Application fire-extinguishing system is in satisfactory								

7.13.7	.7 Sprinkler System(S)								
	Examining the System(s) and testing as far as practicable and found satisfactory								
	Checking the Visual and Audible alarm was automatically activated whenever system(s) operate(s)								
7.13.8	Dry Powder System(S)								
	Examining the System(s) and testing as far as practicable and found satisfactory								
7.14	Examining each fire pump including the emergency fire pump (including starting and priming arrangements) can be operated separately and is capable of producing the required two jets of water simultaneously. Checking to ensure proper maintenance, inspection and testing has been done.								
7.15	Examining the fire main (no soft patches or doublers and no leaks on piping when operationally tested to working pressure) together with flanges and valves, hydrants, hoses, nozzles, applicators, spanners and relief valves are maintained in good working condition and situated at their respective locations. Confirming that the satisfactory operation of all isolation valves incl. identification.								
7.16	For vessels fitted with deep fat cooking equipment, Checking for evidence of proper maintenance, testing and inspection. Checking that instructions, notices and markings are posted. Checking that arrangements are in good order and maintained ready for use.								
7.17	Checking that control stations, lifesaving appliance stowage positions, escape routes and places of embarkation into the survival craft are in order. Examining that cargo spaces (except open deck areas or refrigerated holds) automatic smoke detection system and fixed quick acting fire extinguishing system are in satisfactory condition. For crew accommodation (more than 50m2 deck area), examining the fixed sprinkler system for satisfactory condition. Confirming that plan of the fixed sprinkler system is displayed at each operating station. Examining the drainage arrangement.								
7.18	Fire Fighter's Outfit								
7.18.1	Checking each unit complete and in good condition								
7.18.2	Checking each outfit complete with air cylinders, including spare cylinders fully charged (2Nos spare cylinders for each outfit set)								
7.18.3	Hydraulic pressure testing of SCBA cylinders last carried out on (every 5 years)								
7.18.4	Vessel fitted with a suitably located means for fully recharging breathing air cylinders free from contamination (mandatory for passenger ships carrying more than 36 passengers and constructed on or after 1 July 2010)								
7.18.5	Smoke mask, air pump and hose tested and found satisfactory								
7.19	Crafts Engaged in The Carriage of Dangerous Goods								
7.19.1	Examining the special arrangements and equipment as per the Record attached to the Document of Compliance (if applicable), in good condition and operating satisfactorily.								
8	Life-Saving Appliances and Arrangements								
8.1	Confirming that posters or signs are provided on or in the vicinity of survival craft and their launching controls illustrating purpose of controls and procedures for operating the appliance and give relevant instructions and warnings using recommended symbols.								
8.2	Confirming that containers, brackets, racks and other similar stowage locations for life-saving equipment, are marked with required symbols, indicating the devices stowed in that location for that purpose. If more than one device is stowed in that location, the number of devices also is indicated.								
8.3	Confirming that spares and repair equipment are provided for life-saving appliances and their components which are subject to excessive wear or consumption.								
8.4	Examining the designated helicopter pick-up area (required for voyages having duration of 2hrs or more)								
8.5	Date of last crew muster and fire and boat drills (which should include inspection of thos operating equipment included in the check list as contained in the instructions, or on-board ma (Required monthly)	aintenance)							
8.6	Date of visual inspection of survival craft, rescue boats, launching appliances, testing of lifeboat boats engine, and testing of the general alarm system (Required weekly)	and rescue							
8.7	Survival craft equipment examined and found to be complete. (It is to be further confirmed that monthly inspections of all survival craft and rescue boats including engines and launching appliances plus the general alarm system are being carried out and logged)								

8.8	Dates when li	ifeboat falls ren	ewed or revers	sed BOA	Г RE	ENEWED	)	REVER	SED			
				1								
				2								
				3								
				4

8.23.6	Checking that abandon craft	audibl	e signals o	perating s	atisfacto	orily					
8.23.7	Checking that operative test alarm systems are carried out			power su	pplies, o	emer	gency li	ghting ar	nd geno	eral	
8.23.8	Checking that all embarkation	on arrar	ngements a	nd launch	ing gea	r are	in satisf	actory co	onditio	n.	
8.23.9	Checking that IMO recomm	ended s	symbols as	required	posted t	hroug	ghout th	e vessel			
8.23.10	Checking that Lifeboat laune	ching in	nstructions	posted							
8.24	Life Rafts										
8.24.1	Examining that Life raft st where required	owage	will facil	tate prop	er relea	se in	cluding	float fre	e faci	lity	
8.24.2	Checking that launching inst	truction	is posted								
8.24.3	Examining that the embarka launching arrangements of d								vided,	the	
8.25	Rigid Liferafts										
8.25.1	Examining each liferaft and and .fitted with retro reflecti			l conditio	n, stow	ed to	facilita	te rapid	launch	ing	
8.25.2	Examining the Raft and ematerial.	quipme	nt and in	good co	ndition	and	raft wi	th retro	reflect	ive	
	Indicate expiry date (E) or m	nanufac	ture date (	M)							
			E/M F	/L/RAFT	. 1 E/	Μ'	R/L/F	AFT 2	E/M	R	/L/RAFT.
8.25.3	Two orange smoke signals										
8.25.4	Four parachute signals										
8.25.5	Six red hand-held flares										
8.26	Stowage of Survival Craft	and Re	escue Boat	S							
8.26.1	Examining that the Stowag interfere with operation of o						s satisfa	actory ar	nd do	not	
8.26.2	Checking that the Survival c	rafts ar	e fully equ	ipped and	l in a sta	te of	continu	ous read	iness		
8.27	Lifejackets		_								
8.27.1	Confirming the Complete n for HSC Safety Certificate e				ets, as s	howr	1 on Re	cord of E	quipm	ent	
8.27.2	Checking that Each lifejacke			-							
8.27.3	Checking that Lifejackets sto	owed in	accessibl	e and clea	rly mar	ked p	laces				
8.28.4	When checked for, proper st satisfactory results	owage,	a random	examinat	ion of th	ne con	ndition	of life jac	kets g	ave	
8.27.5	Confirming that each lifejac	ket fitte	ed with ret	o reflecti	ve mate	rial					
8.27.6	Confirming that the life Ja provided if of flashing type)	cket L					r II/2.2.	3 (Manu	al swi	tch	
8.27.7	Validity of life jacket lights.										•
8.28	Lifebuoys, Immersion Suit										
8.28.1	Lifebuoys:		-								

8.28.2	Confirming the Complete in number as shown on Record of Equipment for HSC Safety Certificate and in good condition	
8.28.3	Confirming that the lifebuoy is highly visible colour, fitted with brackets and readily accessible	
8.28.4	Confirming that the lifebuoy is marked in block letters with name and port of registry of craft	
8.28.5	Checking that the lifebuoys are fitted with lines, lights or light and smoke as on Record of Equipment for HSC Safety Certificate	
8.28.6	Capable of being rapidly cast loose	
8.28.7	Confirming that it is fitted with retro reflective material	
8.28.8	MOB marker expiry date: 1	
8.28.9	Checking the Immersion suits/Anti-exposure suits and thermal protective aids as on Record of Equipment for HSC Safety Certificate and in good condition, including that, stowed in survival craft as equipment	
8.28.10	Checking that the Immersion suits designed to be worn in conjunction with a lifejacket are suitably marked to indicate that it must be worn in conjunction with a compatible lifejacket. (Note: It is to be ensured that where immersion suits onboard a craft are NOT provided with separate gloves and are to be worn in conjunction with life jackets, the life jackets provided onboard are with quick and positive means of closure that do not require tying of knots).	
8.28.11	Monthly Inspection and testing of Immersion suits carried out in accordance with makers instructions.	
8.28.12	Immersion suits zippers are fully operational, not deteriorated, and open and close without binding.	
8.28.13	All Immersion suits/ anti exposure suits seams tested every 3 years (more frequently after 10 years). Last testing done	
9	Machinery	
9.1	Confirming that machineries and associated piping systems and fittings relating to main machinery and aux. power are protected as to reduce any danger to persons, due regard being paid to moving parts, hot surfaces and other hazards. Surfaces with temperature exceeding 220°C where impingement of flammable liquids may occur are insulated with impervious insulation. Draining of excess fuel and oil to safe position. Every pressure vessel and associated piping systems is fitted with adequate means to prevent over-pressures in service.	
9.2	Confirming that normal operation of propulsion machinery can be sustained or restored even though one of the essential auxiliaries becomes inoperative. Test of first start arrangement.	
9.3	Confirming that provision of two independent means of propulsion for category B passenger crafts. Essential machinery and control can be maintained in the event of a fire or other casualties in any one compartment on board (applicable only for Category B Passenger Crafts).	
9.4	Testing of engine safety monitoring devices e.g. over speed, lubricating oil low pressure, loss of cooling medium, high temperature, malfunction of moving part, overload. Test of independent means (at least two is to be provided) of stopping the engines quickly from the operating compartment under any operating conditions.	
9.5	Confirming that high pressure fuel delivery line are jacketed and led to a collection tank. Test of leak-off alarm.	
9.6	Examining and testing of automation and remote controls, bilge alarm system, remote machinery instrumentation and alarm system. Test of controls from craft's operating compartment and any other machinery controls provided as per requirement.	
9.7	Confirming that the ventilation arrangement for machinery spaces. Confirming that arrangement for protection against ingress of foreign matter at the intakes is in satisfactory condition. Where low flash point fuels are used, Verification that an interlock is fitted for operation of ventilation prior to starting engines.	
9.8	Confirming that the arrangements provided to ensure that, in the event of failure in any liquid cooling system, it is rapidly detected and alarmed (visual and audible) and means instituted to minimize the effects of such failures on machinery serviced by the system.	
9.9	Where Gas turbines are fitted, Confirming that the arrangement with due regard to probable shedding of compressor or turbine blades will not endanger the craft and the persons. Confirming that the protection arrangements provided to turbine against ingestion of contaminants, accumulation of salt deposits, air intake from icing. Suitable guard fitted. Test of protection and safety devices for the gas turbine.	

10	Auxiliary Systems	
10.1	Examining of any non-metallic piping, if located in a system which penetrates the craft's side and are located below the deepest load waterline to confirm that these are in satisfactory condition and have been replaced at an interval recommended by the manufacturer.	
10.2	Examining the arrangements of oil fuel, lubricating oil and other flammable oil lines are suitably screened/protected, flexible pipes in use are of approved type. Illumination of machinery spaces containing oil fuel systems containing heated oil under pressure. Provision of save-all or gutters under every fuel tank. Provision of oil level gauges in place of sounding pipes, if fitted (cylindrical gauge glasses are not allowed).	
10.3	Where daily service tanks are filled automatically or remotely, Confirming that the suitable means provided to prevent overflow (level gauges, etc.).	
10.4	Where daily service tanks or settling tanks are heated and if the flashpoint of the oil can be exceeded by the heating system, checking of the high temperature alarm is satisfactory.	
10.5	Examining and testing of bilge pumping and drainage. Test of self-priming arrangements. Examining and testing of emergency bilge suction arrangement and provision of extended spindle above machinery space floor plates. Provision of bilge alarm for unattended machinery space. Marking of all manually operated valves. Distribution of bilge pumps, their source of power and provision of an emergency bilge pump in case of a <b>category B passenger craft</b> .	
10.6	Where exhaust is discharged through hull in the vicinity of water line, verification of the means to prevent water flooding or entering the exhaust manifold.	
11	Remote Control, Alarm and Safety Systems	
11.1	Examining the arrangement for transfer of control between various stations, two way communication between all stations including the look-out position, provision of backup system for <b>category B passenger crafts</b> .	
11.2	Examining and testing of emergency controls from operating compartment e.g. fixed firefighting system, closing ventilation opening/fans, shut off fuel supplies, disconnect electrical power supplies, stop main engine/aux. engine. Provision of emergency control at one or more station outside operating compartment for <b>category B Passenger crafts</b> .	
11.3	Examining and testing of alarm (audio and visual) systems provided at craft's control position. Confirming that alarms can be maintained until they are accepted and the visual indications of individual alarms remain until the fault has been corrected, in case a second fault occurs before the first is rectified, the audible and visual alarms operates again, alarm systems incorporate a test facility. Provision of separate alarm with visual indication distinct from others provided for conditions requiring action to prevent degradation to an unsafe condition. Checking the monitoring system for fire and flooding in passenger, cargo and machinery spaces.	
11.4	Confirming that where overriding function is fitted for automatic shutdown system for the main propulsion machinery, these preclude any inadvertent operation, audible and visual alarms are activated when shut down system is activated.	
12	Electrical Installations	
12.1	Examining the safety arrangements against electrical shock, fire, other hazards of electrical origin. Verification that exposed metal parts of electrical machines are suitably earthed, main switchboard placed relative to the main generating station to ensure integrity of the normal supply in one space, easy access is available and switchboard is guarded with provision of nonconducting mats/gratings, segregation of distribution system for main and emergency power provided.	
12.2	Checking the provision for detecting earth faults/monitoring the insulation level is available with alarm function.	•••••
12.3	Confirming that electrical wiring/cables are of approved flame retardant type and electrical equipment in hazardous area are "safe type"	
12.4	Confirming that electrical aux. services necessary for normal operation and habitable condition can be maintained by main source of power without recourse to emgy source of power, with any one generator or its primary source of power out of operation, the remaining generating set is capable of providing the electrical services necessary to start the main propulsion plant from dead craft condition.	
12.5	Testing of short circuit and overload protecting device.	
12.6	Examining that the emergency source of electrical power and associated transforming equipment, transitional source of power, emgy switchboard are in satisfactory condition.	

		•
12.7	When the emgy source of power is a generator, Confirming that the automatic starting function and confirmation that electrical power can be restored in 45s. Verification that the emergency switchboard supply from main switchboard during normal operation and interconnector feeder protected at main switchboard against overload and short circuit and disconnect upon failure of main source of electrical power, Provision of disconnection of non-emergency circuit when emergency source of power is supplied, Provision of transition source of power.	
12.8	Confirming that emergency generating set is equipped with starting devices with a stored energy capability of at least three consecutive starts and arrangement exists to preclude critical depletion of the stored energy (not required where a second independent means of starting is provided). A second source of energy is provided for an additional three starts within 30 minutes (not required where manual starting is provided).	
12.9	Checking the provision of transitional source of power.	
12.10	Where the emergency source of electrical power is an accumulator battery, means of charging and automatic connection to emergency switchboard to verify. No accumulator battery is stored in the same space as the emgy switchboard. Indicator for battery discharge is provided in the craft's operating compartment.	
12.11	Where steering is dependent on one device, confirming that electrical power supply through two independent circuits (one of which is fed through emergency switchboard or an independent power supply) are in order. Verification and test of short circuit protection, overload alarm and where provided protection against excess current (et point should not be less than twice the full load current)	
12.12	Checking the storage of accumulator batteries including provision of ventilation and Confirming that electrical or other light fitting are installed in the compartment are of "safe type". (accumulator batteries are not allowed to be stored in the crew accommodation).	
13	Ship Borne Navigational Systems, Equipments and VDR	
13.1	Confirming that testing of VDR and AIS carried out by an approved testing and servicing facility	
13.2	Standard Magnetic Compass	
13.2.1	Compass Deviation Record Book being kept up-to-date.	
13.3	Gyro Compass (Required for passenger craft certified to carry 100 passengers or more)	
13.4	Arrangement for supplying visual compass readings to emergency steering position	
13.4	Gyro Compass bearing repeaters	
13.6	Gyro Compass bearing repeaters	•••••
13.7 13.8	Automatic steering Aid (Automatic Pilot) (with provision to change to manual mode) Transmitting Heading Device (Required for passenger craft certified to carry 100 passengers or less)	•••••
13.9	Means of steering and means to show the mode of propulsion system(s)	
13.10	Electronic Chart Display and information system (ECDIS)/Nautical charts* Performance Standard of ECDIS: MSC.232(82)/A.871(19) as amended	
13.11	Back up arrangements for ECDIS: 2nd ECDIS/Nautical charts	
13.12	Nautical publications	
13.13	Receiver for a Global Navigation Satellite System/a Terrestrial Radio Navigation System	
13.14	Radar 9GHZ (3 cm)	
13.15	Radar 3GHZ (10 cm) (required for or craft certified to carry more than 450 passengers in addition to 9GHz radar)	
13.16	Automatic Radar Plotting Aids (ARPA)	
13.17	Auto Tracking Aid (ATA)	
13.18	Automatic Identification System (AIS)	
	Voyage Data Recorder (VDR) (required for all passenger craft irrespective of size)	
13.19	v Oyage Data Recorder (v DR) (required for an passenger craft intespective of size)	
13.19 13.20	Speed and Distance measuring device (speed and distance measuring devices on craft fitted with an ARPA or ATA shall be capable measuring distance through water)	
13.20	Speed and Distance measuring device (speed and distance measuring devices on craft fitted with an ARPA or ATA shall be capable measuring distance through water)	
13.20 13.21	Speed and Distance measuring device (speed and distance measuring devices on craft fittedwith an ARPA or ATA shall be capable measuring distance through water)Echo Sounding Device (Required for non-amphibious craft)	
13.20	Speed and Distance measuring device (speed and distance measuring devices on craft fitted with an ARPA or ATA shall be capable measuring distance through water)	

13.25	Daylight signaling lamp and source of power												
13.26	Search Light												
13.27	Night Vision Equipment												
13.28	Radar reflectors (required for craft of 150GT and below)												
14	Radio Communications

14.9.2 Performance test run of the self-test pr	ans of an approv spection of recen		ł											

14.10	Enhanced Group Call (EGC)												
14.10.1	Checking for correct operation and area by monitoring incoming messages or by inspecting recent hard copy.												
14.10.2	Performance test run of the self-test programs, if provided.												
14.11	HF-NBDP Equipment												
14.11.1	Examining if appropriate of the radio equipment for receipt of MSI by HF/NBDP												
14.11.2	Performance test run of the self-test programs, if provided.												
14.12	Two Way Radio Telephone Apparatus												
14.12.1	Examining the two way VHF radio apparatus including verification of its correct operation on both channel 16 and any other channel through a test with another fixed or portable VHF installation.												
14.2.2	Confirmation that primary batteries of two way VHF are valid.												
14.12.3	Examining the charging arrangement for battery, where rechargeable battery is used												
14.12.4	Where appropriate, checking any fixed installation provided in a survival craft												
14.13	EPIRB												
EPIRB													
14.13.1	Checking the condition by visual examination, position and mounting for float free operation												
14.13.2	Self-test routine												
14.13.3	Labeling of EPIRB												
14.13.3.1	Verification of battery expiry date												
14.13.3.2	Manufacturer's serial number												
14.13.3.3	Verification the call sign of the craft marked on the EPIRB												
14.13.4	Verification of hydrostatic release and its expiry date .												
14.13.5	Confirming the emission on operational frequencies, coding and registration on the 406 MHz signal without transmission of a distress call to the satellite												
14.13.6	Annual Testing of the EPIRB carried out as required												
14.13.7	Date system last replaced or Shore based maintenance carried out												
14.13.8	Verification that EPIRB ID is clearly marked on the outside of the equipment												
14.14	Secondary Means of Alerting												
Designated	l equipment												
VHF (DSC	C) Ship Earth Station (Type & Model)												
MF (DSC)													
14.15	SART/AIS-SART												
14.15.1	Operational test of Survival craft radar transponder/ AIS SART*												
14.15.2	Verification of Battery expiry date												
14.16	Automatic Identification System												
14.16.1	Operational test carried out												
14.16.2	Annual testing of AIS carried out on												
14.17	Ship Security Alert System												
14.17.1	Functionality test carried out with competent authority												
14.18	Voyage Data Recorder/ Simplified Voyage Data Recorder												
14.18.1	Operational test carried out												
14.18.2	Voyage Data Recorder (VDR)/ S-VDR Annual performance Test carried out on												
14.19	Long Range Identification and Tracking												
14.19.1	Conformance Test Certificate is available on board												
14.19.2	DNID member number registered by CSP in the LRIT ship borne equipment (i.e. Sat C) is not disabled or deleted												
14.20	On Passenger Crafts only												
14.20.1	Two way on-scene radio communication on 121.5 MHz and 123.1 MHz from navigating bridge.												
14.20.2	A GOC Certified operator assigned to perform only radio communication duties during distress incidents.												

14.21	GMDSS Radio Operators	
14.21.1	Is the Craft operator(s) able to use the GMDSS equipment and carry out function tests for	
14.21.1	transmitting and receiving distress and safety alerts	
14.21.2	Is craft's operators able to explain correct procedures for the followings:	
14.21.2.1	Canceling a false distress alert (Res.A.814(19))	
14.21.2.2	Receiving a distress alert.	
14.21.2.3	Sending a distress alert	
15	Operating Compartment Layout	
15.1	Checking the operating compartment/navigating work station with due regard to	
	ergonomics, temperature/ventilation, safety measures, field of vision and blind sectors, seat	
	for operating crew, lighting, provision of clear view through window, provision to avoid	
	glare, reflection and adjust lighting intensity.	
15.2	Checking the internal communication facilities e.g. between the operating compartment and	
	other spaces, communication between crew members in both normal and emgy conditions,	
	provisions for means to monitor, receive and transmit radio safety messages at the operating	
	compartment, means of making public address and safety announcements.	
16	Stabilisation Systems	
16.1	Examining the automatic stabilization system, provision for overriding automatic safety	
	control and cancel the override from main operating station.	
17	Handling, Controllability and Performance	
17.1	Confirming that information on change in craft behavior during transition from one type of	
	operating surface or mode to another and craft operating limitations due to surface	
	irregularities is available to the vessel master.	
17.2	Confirming that information on max safe speeds and min depth of water for all modes of	
-	operation and for amphibious craft, clearance of the hard structure when cushion-borne are	
	available.	
18	Operational Requirements	
18.1	Confirming that safety provisions have been made by operator as per section 18.1.3 of the	
	Code	
18.2	Demonstration of emgy evacuation	
18.3	Witnessing rescue boat and fire drill	
19	Issuance/Endorsement of Certificate	
19.1	Confirming that the Periodical Survey/Renewal Survey* completed satisfactorily.	
19.2	General examination of the vessel carried out satisfactorily towards with the scope of	
	Periodical Survey/Renewal Survey*.	
	(Note: (i) Authorisation reference received from head office/flag Administration are to be	
	provided under "Remarks".	
	(ii) Further survey scope covered for postponement survey are to be confirmed by indicating	
	under "Remarks".)	
19.2	On satisfactory completion of the survey/examination*, Full-Term High Speed Craft Safety	
	Certificate has been issued/endorsed/extended/ Interim certificate issued/ Short term	
	certificate issued*	
	(Note: Validity of the short term certificates and other conditions based on which the	
	certificate is issued are to be included in the "Remarks" section.)	
19.3	Confirming that the Periodical Survey/Renewal survey* carried out partly as reported.	
	Extent of survey/examination carried out/pending is reflected in the survey status.	
	(Note: Explanation for carrying out surveys partly may be included under "Remarks")	
19.4	Periodical Survey could not be completed within the survey window, details of reason and	
	actions taken provided under 'Remarks'.	
	(Note: Extent of survey/examination carried out /pending is to be reflected in the survey	
	status.)
